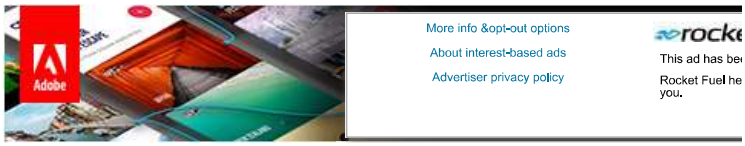
Python, Django and MySQL Project on Airlines Information System

(tel:+918470010001) (https://api.whatsapp.com/send?phone=918470010001)



Python, Django And MySQL Project On Airlines Information System

This mini project **Airlines Information System** has been developed on **Django, Python and MySQL.** We are providing **mini project topics in python** and also **mini projects in python with source code.** Here students can get **python projects with source code (https://www.freeprojectz.com/python-projects)** free download. There is a single user admin in this **mini python project Airlines Information System.** The admin can manage all the information related Airlines after the login and after login admin can also edit, delete and update airlines name details, airlines numbers, airlines seat details and Airlines types details. The main objective for developing this mini python project **Airlines Information System** is to provides information about Airlines. Student can download free **python mysql (https://www.freeprojectz.com/python-projects)** academic college projects with source code database and documentation. Students can easily search and find **python source code (https://www.freeprojectz.com/python-projects)** projects here.

I have attached the Screens and demo of the project below the description. Look into for more details.

Modules and Description of Airlines Information System Project:

Airlines Module :

The main aim of this module is provide all the functionality realted to Airliness. This Airlines Module is an important module in this mini project **Airlines Information System** which has been developed on **Python, Django and MySQL.** We provide full **online python projects (https://www.freeprojectz.com/python-projects)** with source code. It tracks all the information and details of the Airlines. We have developed all type of CRUD (Create, Read, Update and Delete) operations of the Airliness.

Features of Airlines Module:

- Admin can add new Airliness records
- Admin can see the list of Airliness details
- Only admin can edit and update the record of the Airliness
- Admin will be able to delete the records of the Airliness
- All Airliness forms are validated on client side using JavaScript

Login Module :

This is the login form, from where Admin can login into the system.

Features of Login Module:

- Admin can add new Login records
- Admin can see the Login details
- Only admin can edit and update the record of the Login
- Admin can change the password

Functionality and modules of the project Airlines Information System:

- Login For Admin
- Logout Functionality
- Change Password Functionality
- Dashboard for Admin
- **Airlines Management Module**
  - Adding New Airlines Details
  - Edit the Exiting Airlines Details
  - View all the details of the Airliness
  - Listing of all Airlines
- **Reports of the ject Airlines Information Syste**
  - Report of a ess

(tel:+918470010001) (https://api.whatsapp.com/send?phone=918470010001)

Static Pages and other sections :

These static pages will be available in project Airlines Infromation System

- Home Page with good UI
- Home Page will contain an animated slider for images banner
- About us page will be available which will describe about the project
- Contact us page will be available in the project

Technology Used in the project Airlines Infromation System System

We have developed this project using the below technology

- HTML : Page layout has been designed in HTML
- CSS : CSS has been used for all the desigining part
- JavaScript : All the validation task and animations has been developed by JavaScript
- Python : All the business logic has been implemented in Python
- MySQL : MySQL database has been used as database for the project
- Django : Project has been developed over the Django Framework

Supported Operating System

We can configure this project on following operating system.

- **Windows :** This project can easily be configured on windows operating system. For running this project on Windows system, you will have to install Python 2.7, PIP, Django.
- **Linux :** We can run this project also on all versions of Linux operating system
- **Mac :** We can also easily configured this project on Mac operating system.
